Vassiliko Cement Works presents the new type of low hydration heat Cement (Portland Pozzolana Cement CEM II/A-P 42,5N-LH)

At a special event that took place on Thursday, August 30th, 2018 in Vassiliko Cement Works facilities, clients from the local Cypriot market were given a presentation on the new type of low hydration heat cement (Portland Pozzolana Cement CEM II/A-P 42,5N-LH).

After studying the external business environment over the last years and taking into consideration the needs of its clients, Vassiliko Cement Works proceeded to creating an alternative product choice, ultimately aiming to provide an upgraded service in the Cypriot market.

The new type of low hydration heat cement (Portland Pozzolana Cement CEM II/A-P 42,5N-LH) was presented to the clients by the Head of Research & Development of Vassiliko Cement Works, Dr. Kimonas Evagorou, who communicated all necessary details and answered all questions raised by the audience. By participating in tests and applications for perfecting the new product, the company's commitment to its clients is by now granted.

The low hydration heat cement (Portland Pozzolana Cement CEM II/A-P 42,5N-LH) will be available in the market as of October 2018 and will be mainly used in massive constructions (e.g. footings, dams) for preventing microcracks formation in concrete.

One of the company's core values is responsibility towards the client and full customer satisfaction. Vassiliko Cement Works, being a client-centered company, constantly improves and enriches the quality of its products as well as the quality assurance equipment technology, gaining its clients' trust through absolute transparency.

Vassiliko, September 7th, 2018
