

CORPORATE SOCIAL RESPONSIBILITY POLICY

For Vassiliko Cement Works it's a consistent value and decision-making factor, not just in conjunction with financial elements, but also based on what might be the long term social and environmental repercussions of the company's operations.

Our firm's commitment to sustainability is an essential tool for developing trust with everyone connected with our activities, including shareholders, associates, local private and public organisations and other communities.

Awareness of social responsibility significance, has driven us to steadfast commitment towards this end. As an interjection of prosperity, environmental policies and social contribution, corporate responsibility is the cornerstone of the future.

Our business mentality and ethics are founded on the conviction that long term sustainable performance and development is impossible without collective and individual care for our employees and the protection of our working environment and the nature that surrounds us.
